

CBSE 2025-26

Class 12 - Mathematics

Application of Derivatives

Important Question

Question No. 1 to 5 are based on the given text. Read the text carefully and answer the questions:

A telephone company in a town has 500 subscribers on its list and collects fixed charges of 300 per subscriber per year. The company proposes to increase the annual subscription and it is believed that for every increase of 1 one subscriber will discontinue the service.

1. If x be the annual subscription then the total revenue of the company after increment will be:
- a. $R(x) = -x^2 + 200x + 150000$

b. $R(x) = -x^2 + 100x + 100000$

c. $R(x) = x^2 - 200x - 140000$

d. $R(x) = 200x^2 + x + 150000$
2. To find maximum profit we put
- a. $R'(x) = 0$

b. $R'(x) < 0$

c. $R'(x) > 0$

d. $R''(x) = 0$
3. How much fee the company should increase to have maximum profit?
- a. ₹ 250

b. ₹ 150

c. ₹ 200

d. ₹ 100
4. Find the maximum profit that the company can make if the profit function is given by $P(x) = 41 + 24x - 18x^2$.
- a. 49

b. 25

c. 44

d. 45
5. Find both the maximum and minimum value respectively of $3x^4 - 8x^3 + 48x + 1$ on the interval $[1, 4]$.
- a. 257, -63

b. -63, 257

c. 258, -63

- d. -63, -257
6. If the function f defined as $f(x) = 2x^3 - 9ax^2 + 12a^2x + 1$, where $a > 0$, attains its maxima and minima at p and q respectively such that $p^2 = q$, then a equals:
- 3
 - $\frac{1}{2}$
 - 2
 - 1
7. The global maximum value of $f(x) = \cot x - \sqrt{2} \operatorname{cosec} x$ in interval $(0, \pi)$ is equal to:
- 0
 - 1
 - 1
 - non-existent
8. Let $f(x) = x^3 - 6x^2 + 9x + 8$, then $f(x)$ is decreasing in
- $(-\infty, 1)$
 - $[1, 3]$
 - $(-\infty, 1) \cup (3, \infty)$
 - $[3, \infty]$
9. The function f given by $f(x) = \cos x + \cos \sqrt{3}x$
- attains its global maximum at $x = 0$
 - is odd
 - is periodic
 - is not differentiable
10. For the function f defined as $f(x) = x - \left(\frac{1}{x}\right)$ $x \geq 1$, which one of the following is correct?
- For at least one x in the interval $(1, \infty)$, $f(x + 2) - f(x) < 2$
 - $f(x)$ is decreasing in the interval $(1, \infty)$
 - $\lim_{x \rightarrow \infty} f'(x) = 1$
 - for all x in the interval $(1, \infty)$, $f(x + 2) - f(x) > 2$
11. State True or False:
- The $f: \mathbb{R} \rightarrow \mathbb{R}$ be defined by $f(x) = 2x + \cos x$, then f is a decreasing function.
 - True
 - False
 - The function $f(x) = \tan^{-1} x$ always increases.
 - True
 - False
12. Fill in the blanks:
- $y = x(x - 3)^2$ decreases for the values of x given by _____.
 - The interval on which the function $f(x) = 2x^3 + 9x^2 + 12x - 1$ is decreasing is _____.
13. If $h(x) = f(x) + f(-x)$, then show that $h(x)$ has maximum value at the point where $f'(x)$ is an even function.
14. Show that $f(x) = x + \cos x - a$ is an increasing function on $\mathbb{R}$ for all values of a .
15. Determine the values of $f(x) = x^x, x > 0$ for which f is increasing or decreasing.
16. Prove that the function f given by $f(x) = x^2 - x + 1$ is neither strictly increasing nor strictly decreasing on $(-1, 1)$.

17. A tank with a rectangular base and rectangular sides open at the top is to be constructed so that its depth is 3 m and volume is 75 m³. If building of tank costs Rs. 100 per square metre for the base and Rs. 50 per square metres for the sides, find the cost of least expensive tank.
18. A point on the hypotenuse of a triangle is at distance a and b from the sides of the triangle. Show that the minimum length of the hypotenuse is $(a^{\frac{2}{3}} + b^{\frac{3}{2}})$.

ATDB.uno

Solution

1. (a) $R(x) = -x^2 + 200x + 150000$

Explanation: $R(x) = -x^2 + 200x + 150000$

2. (a) $R'(x) = 0$

Explanation: $R'(x) = 0$

3. (d) ₹ 100

Explanation: ₹ 100

4. (a) 49

Explanation: 49

5. (a) 257, -63

Explanation: 257, -63

6. (c) 2

Explanation: $f(x) = 2x^3 - 9ax^2 + 12a^2x + 1$

Differentiating with respect to x, we get

$f'(x) = 6x^2 - 18ax + 12a^2$

$f'(x) = 0$

$\Leftrightarrow 6x^2 - 18ax + 12a^2 = 0$

$\Leftrightarrow x^2 - 3ax + 2a^2 = \Leftrightarrow (x - a)(x - 2a) = 0$

$\Rightarrow x = a \text{ or } x = 2a$

$x = a$: a point of relative maxima

$x = 2a$: a point of relative minima

$\Rightarrow p = a, q = 2a$

$\Rightarrow a^2 = 2a \Rightarrow a = 2 \text{ or } a = 0$

$a > 0 \Rightarrow a = 2$

7. (b) -1

Explanation: We have $f(x) = \cot x - \sqrt{2} \operatorname{cosec} x = \frac{\cos x - \sqrt{2}}{\sin x}$

So, $f'(x) = \frac{\sin x(-\sin x) - (\cos x - \sqrt{2}) \cos x}{\sin^2 x}$

$= \frac{-1 + \sqrt{2} \cos x}{\sin^2 x}$

$\therefore f'(x) = 0$

$\Rightarrow \cos x = \frac{1}{\sqrt{2}} \Rightarrow x = \frac{\pi}{4} \in (0, \pi)$

(point of local maximum) Sign scheme of $f'(x)$

$\therefore f(x) \uparrow$ on $(0, \frac{\pi}{4})$ and $f(x) \downarrow$ on $(\frac{\pi}{4}, \pi)$

Graph of $f(x) = \cot x - \sqrt{2} \operatorname{cosec} x$ in $(0, \pi)$

Also, $\lim_{x \rightarrow 0^+} f(x) = \lim_{x \rightarrow 0^+} \left(\frac{\cos x - \sqrt{2}}{\sin x} \right) \rightarrow -\infty$ and $\lim_{x \rightarrow \pi^-} f(x) = \lim_{x \rightarrow \pi^-} \left(\frac{\cos x - \sqrt{2}}{\sin x} \right) \rightarrow -\infty$ and $f(x)$ is also continuous on $(0, \pi)$

Clearly, $f(x)$ is also continuous on $(0, \pi)$

$\therefore$ At $x = \frac{\pi}{4}$ (a local maximum point),

So, $f(x)$ takes its absolute maximum value also at $x = \frac{\pi}{4}$

Hence, absolute maximum value of $f(x = \frac{\pi}{4}) = 1 - \sqrt{2}(\sqrt{2}) = 1 - 2 = -1$

8. (b) $[1, 3]$

Explanation: Here, $f'(x) = 3x^2 - 12x + 9 = 3(x - 1)(x - 3) \leq 0 \Leftrightarrow x \in [1, 3]$

9. (a) attains its global maximum at $x = 0$

Explanation: $f(-x) = f(x) \Rightarrow f$ is an even function.

Let $g(x) = \cos x$, $h(x) = \cos \sqrt{3}x$.

The function h and g are periodic with periods

2π (= a, say) and $\frac{2\pi}{\sqrt{3}}$ (= b, say).

Since $\frac{a}{b}$ is not rational.

Therefore f is not periodic.

f is differentiable everywhere,

$\cos x \leq 1$ and $\cos \sqrt{3}x \leq 1 \dots$ (i)

$\Rightarrow \cos x + \cos \sqrt{3}x \leq 2$

$\Leftrightarrow f(x) \leq 2$

The global maximum value of $f(x) = 2$ if equality occurs in (i).

(Equality in (i) occurs when $x = 0$).

$\Rightarrow$ Global maximum of f occurs at $x = 0$

10. (a) For at least one x in the interval $(1, \infty)$, $f(x + 2) - f(x) < 2$

Explanation: $f(x) = x \cos\left(\frac{1}{x}\right)$, $x \geq 1$

f differentiable.

$\Rightarrow f'(x) = \cos\left(\frac{1}{x}\right) + \frac{1}{x} \sin\left(\frac{1}{x}\right)$ and $f''(x) = -\frac{1}{x^3} \cos\left(\frac{1}{x}\right)$

$\Rightarrow \lim_{x \rightarrow \infty} f'(x) = 1$

Also, $f''(x) < 0$ for all $x > 1$

$\Rightarrow f'$ is decreasing in the interval $(1, \infty)$.

Let $g(x) = f(x + 2) - f(x)$. Then,

$g'(x) = f'(x + 2) - f'(x) < 0 \dots$ [as f' is strictly decreasing]

$\Rightarrow g$ is strictly decreasing on $(1, \infty)$

Now, $\lim_{x \rightarrow \infty} g(x) = \lim_{x \rightarrow \infty} [f(x+2) - f(x)]$

$$\begin{aligned} &= \lim_{x \rightarrow \infty} \left[(x+2) \cos\left(\frac{1}{x+2}\right) - x \cos\left(\frac{1}{x}\right) \right] \\ &= \lim_{x \rightarrow \infty} \left[x \left\{ \cos\left(\frac{1}{x+2}\right) - \cos\left(\frac{1}{x}\right) \right\} + 2 \cos\left(\frac{1}{x+2}\right) \right] \\ &= \lim_{x \rightarrow \infty} \left[2x \sin\left(\frac{x+1}{x^2+2x}\right) \sin\left(\frac{1}{x^2+2x}\right) + 2 \cos\left(\frac{1}{x+2}\right) \right] \\ &= 2 \lim_{x \rightarrow \infty} \left[\frac{\sin\left(\frac{x+1}{x^2+2x}\right)}{\left(\frac{x+1}{x^2+2x}\right)} \times \frac{\sin\left(\frac{1}{x^2+2x}\right)}{\left(\frac{1}{x^2+2x}\right)} \times \frac{x(x+1)}{(x^2+2x)^2} + 2 \cos\left(\frac{1}{x+2}\right) \right] \\ &= 2(1)(1)(0) + 2 = 2 \end{aligned}$$

As function g is decreasing on $(1, \infty)$ and $\lim_{x \rightarrow \infty} g(x) = 2$

$\Rightarrow g(x) > 2$ for all $x \in (1, \infty)$

$\Rightarrow f(x+2) - f(x) > 2$ for all $x \in (1, \infty)$

11. State True or False:

i. (b) False

Explanation: False

ii. (a) True

Explanation: True

12. Fill in the blanks:

a. $1 < x < 3$

b. $[-2, -1]$

ATDB.uno

13. we have, $h'(x) = f'(x) - f'(-x)$

For extreme values of $h(x)$, $h'(x) = 0$

$$f'(x) - f'(-x) = 0$$

$$f'(x) = f'(-x)$$

$f'(x)$ is an even function.

Hence the maximum value of the function occurs when the derivative of $f(x)$ is an even function.

14. We are given that,

$$f(x) = x + \cos x - a$$

$$f'(x) = 1 - \sin x = \frac{2 \cos^2 x}{2}$$

Now

$$x \in \mathbb{R}$$

$$\Rightarrow \frac{\cos^2 x}{2} > 0$$

$$\Rightarrow \frac{2 \cos^2 x}{2} > 0$$

$$\Rightarrow f'(x) > 0$$

Hence, $f(x)$ is an increasing function for $x \in \mathbb{R}$

15. Given: $f(x) = x^x$

$$\Rightarrow f(x) = e^{x \log x}$$

$$\Rightarrow f'(x) = e^{x \log x} \frac{d}{dx} (x \log_e x)$$

$$\Rightarrow f'(x) = x^x (1 + \log_e x)$$

For $f(x)$ to be increasing, we must have

$$f'(x) > 0$$

$$\Rightarrow x^x(1 + \log_e x) > 0$$

$$\Rightarrow 1 + \log_e x > 0$$

$$\Rightarrow \log_e x > -1$$

$$\Rightarrow x > e^{-1}$$

Thus, f(x) is increasing on (1/e, ∞)
for f(x) to be decreasing, we must have

$$f'(x) < 0$$

$$\Rightarrow x^x(1 + \log_e x) < 0$$

$$1 + \log_e x < 0$$

$$x < e^{-1}$$

$$\Rightarrow x \in (0, 1/e)$$

Thus, F(x) increasing on (1/e, ∞) and decreasing on (0, 1/e)

16. Given: $f(x) = x^2 - x + 1$ $f(x) = x^2 - x + 1$

$$\Rightarrow f'(x) = 2x - 1$$

f(x) is strictly increasing if $f'(x) > 0$

$$\Rightarrow 2x - 1 > 0$$

$$\Rightarrow x > \frac{1}{2}$$

i.e., increasing on the interval $(\frac{1}{2}, \infty)$

f(x) is strictly decreasing if $f'(x) < 0$

$$\Rightarrow 2x - 1 < 0$$

$$\Rightarrow x < \frac{1}{2}$$

i.e., decreasing on the interval $(-\infty, \frac{1}{2})$

hence, f(x) is neither strictly increasing nor decreasing on the interval $(-\infty, \infty)$.

17. The given tank is in the form of cuboid.

Volume of cuboid = lbh = 75 m³

$$\Rightarrow lb(3) = 75$$

$$\Rightarrow lb = 25 \quad \dots(1)$$

Cost = 100.l.b + 50(lh + bh + lh + bh)

$$= 100(l)(b) + 100(l + b)h$$

$$= 2500 + 300(l + b)$$

Minimize 2500 + 300(l + b)

$$\text{Cost} = 2500 + 300\left(\frac{25}{b} + b\right)$$

Cost is minimum when $\frac{d}{db}(\text{Cost}) = 0$

$$0 + 300\left(-\frac{25}{b^2} + 1\right) = 0$$

$$300\left(1 - \frac{25}{b^2}\right) = 0$$

$$1 - \frac{25}{b^2} = 0$$

$$b^2 = 25 \Rightarrow b = 5$$

Therefore Minimum Cost = 2500 + 300(5 + 5) = 2500 + 3000 = 5500

$$AP = a \operatorname{cosec} \theta$$

$$BP = b \sec \theta$$

$$L = AP + BP$$

$$l = a \operatorname{cosec} \theta + b \sec \theta$$

$$\frac{dl}{d\theta} = -a \operatorname{cosec} \theta \cot \theta + b \sec \theta \cdot \tan \theta$$

$$\frac{d^2l}{d\theta^2} = a \operatorname{cosec}^3 \theta + a \operatorname{cosec} \theta \cot^2 \theta + b \sec^3 \theta + b \sec \theta \cdot \tan^2 \theta$$

For maximum/minimum

$$\frac{dl}{d\theta} = 0$$

$$\tan^3 \theta = \frac{a}{b}$$

$$\tan \theta = \left(\frac{a}{b}\right)^{\frac{1}{3}}$$

$$\sin \theta = \frac{a^{1/3}}{\sqrt{a^{2/3} + b^{2/3}}}, \cos \theta = \frac{b^{1/3}}{\sqrt{a^{2/3} + b^{2/3}}}$$

$$\frac{d^2l}{d\theta^2} > 0 \text{ for } \tan \theta = \left(\frac{a}{b}\right)^{\frac{1}{3}}$$

L is minimum

$$l = a \operatorname{cosec} \theta + b \sec \theta$$

$$l = \left(a^{\frac{2}{3}} + b^{\frac{3}{2}}\right)$$
